Investment Research - General Market Conditions

19 October 2015

# **Danske Daily**

## Market Movers

- Besides this morning's Chinese data releases (see more below), the calendar is fairly thin, with US housing data released in the afternoon as the highlight.
- The NAHB housing market index for October is expected to be unchanged after climbing in September to 62, its highest level since 2006. Note that further US housing data are due for release later this week, including housing starts and building permits (Tuesday) and existing homes sales (Thursday). Generally speaking, we expect data to support the picture of a housing market that continues to benefit from a favourable mix of low interest rates and positive real income growth.
- Fed's Brainard (voter, dovish) and Lacker (voter, hawkish) are scheduled to speak but the topics are not related to the economic outlook or monetary policy.
- There are no data releases in Scandinavia today.

## Selected Market News

Chinese data disappointed but show no signs of an economy collapsing. A range of data was released in China this morning. Q3 GDP growth was in line with expectations, increasing 1.8% q/q (DBM estimate 1.5% q/q) and 6.9% y/y (consensus 6.8% y/y) but industrial production disappointed, falling to 5.7% y/y (August: 6.1%, consensus 6.0%). As a comparison, the low point for industrial production during the financial crisis in 2008 was 5.4%, so the industrial activity is comparable to this very weak period. The monthly change fell to 0.4% (August: 0.5%) so still no sign of recovery. Fixed asset investment (current prices) fell to 10.3% y/y year-to-date in September (August: 10.9%, consensus 10.8%), the lowest level in 15 years. Finally, China's retail sales showed an increase of 10.9% y/y in September (August: 10.8%, consensus 10.8% y/y).

In our view, the Chinese data show a continued rebalancing of growth; weaker industrial growth is compensated for by higher service sector activity, leaving GDP growth broadly flat. This has global implications, as the service sector is much less reliant on imports than the manufacturing sector. We expect Chinese GDP growth to be broadly flat around 1.8% q/q in Q4 (see *Chinese Q3 GDP in line with expectations but industrial growth continues to disappoint*, 19 October 2015).

Last week's economic data were on the weak side; in the US, September retail sales disappointed, suggesting that momentum in private consumption is slowing, while industrial production declined in Europe in August, in line with expectations. In China, trade data showed exports falling less but the decline in imports increased.

However, global equity indices managed to eke out small gains. In the US, stocks were up for the third week in a row, as the first batch of Q3 results were generally well received by investors. Furthermore, renewed concerns about the economic outlook have also casted doubt on whether the Fed will raise rates in 2015, which in itself may have supported risky assets. Last week, two Fed governors (Tarullo, Brainard) signalled unease about the economic outlook, preferring to wait for more solid evidence that inflation is moving higher before raising rates.

There are no data releases in Scandinavia today.

# Fixed Income Markets

With ECB QE2 looking increasingly likely, the question is whether we will see this boost to asset prices in both European bond and equity markets as was the case with the launch of QE in January (see *chart*). We think the current environment is constructive for European FI, also helped by the slowing EM outflows that imply less selling of core European FI from EM reserve managers. Thus, we stay constructive on EUR duration from 2Y and out, as we do not agree with the market pricing of further ECB depo cuts but that the pressure on the ECB to react should trigger a rally in core rates.

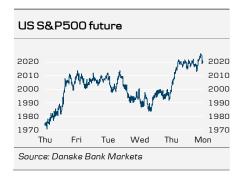

This week's issuance is set to slow down, as only Belgium and Germany are coming to the market, where last week was one of the busiest weeks of the year with gross issuance close to EUR30bn in the EGB market. There are no coupons or redemptions next week but in two weeks' time the cash flow will become significantly more positive and with ECB's frontloading of QE, we look for more spread compression between core and semi-core, even though we have already seen some performance.

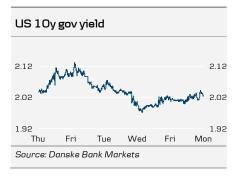

Today, Belgium is tapping in the 7Y, 10Y and 30Y bonds. As the tap is relatively modest, this should easily be absorbed. We prefer France relative to Belgium given the very tight spreads and better liquidity in French government bonds.

## **FX Markets**

On Friday, we published our latest *FX Forecast Update*. The most significant change we made was regarding our short-term outlook for USD/JPY. We now expect that the BoJ will announce an increase in its target for its annual monetary base expansion to JPY 100trn from JPY80trn at the 30 October meeting. This should ensure short-term support for USD/JPY and we have revised our 1M and 3M forecasts higher to 124 (120 previously) and 125 (124) respectively. We continue see EUR/USD as range-bound between 1.10-1.16 over the coming months and higher over 6-12 months. We have lifted our 3-6 M EUR/USD forecasts higher to 1.12 from 1.10 and our 12M forecasts higher to 1.20 from 1.15 previously. Underlying forces, such as the eurozone's large trade surplus, support a stronger EUR in the medium term and we have reflected that in our forecasts.

We have made no changes to our EUR/SEK and EUR/DKK forecasts where we continue to forecast EUR/SEK to trade at 9.40 at 1M and 3M. We believe that the short-term risk in EUR/NOK is to the upside as the market has priced out the probability of another Norges Bank rate cut in 2015. However, we have lowered our 1M and 3M EUR/NOK forecasts slightly to 9.30 from 9.40.

## Today's market data: 19 October 2015

## Disclosure

This research report has been prepared by Danske Bank Markets, a division of Danske Bank A/S ('Danske Bank').

#### Analyst certification

Each research analyst responsible for the content of this research report certifies that the views expressed in the research report accurately reflect the research analyst's personal view about the financial instruments and issuers covered by the research report. Each responsible research analyst further certifies that no part of the compensation of the research analyst was, is or will be, directly or indirectly, related to the specific recommendations expressed in the research report.

#### Regulation

Danske Bank is authorised and subject to regulation by the Danish Financial Supervisory Authority and is subject to the rules and regulation of the relevant regulators in all other jurisdictions where it conducts business. Danske Bank is subject to limited regulation by the Financial Conduct Authority and the Prudential Regulation Authority (UK). Details on the extent of the regulation by the Financial Conduct Authority and the Prudential Regulation Authority are available from Danske Bank on request.

The research reports of Danske Bank are prepared in accordance with the Danish Society of Financial Analysts' rules of ethics and the recommendations of the Danish Securities Dealers Association.

#### Conflicts of interest

Danske Bank has established procedures to prevent conflicts of interest and to ensure the provision of high-quality research based on research objectivity and independence. These procedures are documented in Danske Bank's research policies. Employees within Danske Bank's Research Departments have been instructed that any request that might impair the objectivity and independence of research shall be referred to Research Management and the Compliance Department. Danske Bank's Research Departments are organised independently from and do not report to other business areas within Danske Bank.

Research analysts are remunerated in part based on the overall profitability of Danske Bank, which includes investment banking revenues, but do not receive bonuses or other remuneration linked to specific corporate finance or debt capital transactions.

## Financial models and/or methodology used in this research report

Calculations and presentations in this research report are based on standard econometric tools and methodology as well as publicly available statistics for each individual security, issuer and/or country. Documentation can be obtained from the authors upon request.

## Risk warning

Major risks connected with recommendations or opinions in this research report, including as sensitivity analysis of relevant assumptions, are stated throughout the text.

## Expected updates

Danske Daily is updated on a daily basis.

## First date of publication

Please see the front page of this research report for the first date of publication. Price-related data is calculated using the closing price from the day before publication.
