Wednesday's Flash news (unedited copy)

Buy grains, USA indexes and oil, and sell metals on the higher side on Wednesday

Dear Members,

On Tuesday the market traded sharply higher as predicted, oil and most of the other commodities also traded sharply higher. Metals and oil's trend supported the market's trend. Apple announced earnings and started trading mixed. We don't see any major downside in Apple, and on the higher side we still see room to move 15% higher.

The FED will be announcing its rate decision. We don't see any hike or anything new taking place, but we still recommend staying away from metals. From late Wednesday to Thursday one can take selling positions in gold on any rise as we mentioned in this week's Weekly Newsletter that from Monday to Wednesday we see a positive trend in gold, and from late Thursday gold would start falling so keep this in mind.

At this stage focus on the equity market; buy emerging markets and USA markets on the lower sides as the market will keep moving higher. Short term traders can trade in and out.

This is what we mentioned yesterday: *Monday market and oil traded negative, and on the other hand gold and Thirty Year Bond moved higher on uncertainty. Profit booking was expected to take place in the market as well as oil on Monday. On Tuesday once again the market and oil will make a bottom but won't fall much from Monday's closing. Oil and the market can turn around big time on Wednesday so you should be well placed in your trades. We strongly recommend buying S&P, Nasdaq, DOW as well as oil on Tuesday before the market closes, and if I am not mistaken then on Wednesday, Thursday, and Friday all the major markets can rally big. The US market will outperform every market by moving 5% higher on Wednesday, Thursday and Friday. If I am right, then this will be one of the best money making weeks which will start from mid Tuesday and will continue till Friday.*

Wednesday will be the FED decision, and no one is expecting any rate change. Many metals and Bond traders will be focusing on the rate decisions.

Apple will announce earning tomorrow, we are excited about it, read our daily stock report closely.

Friday most of the global equity markets closed sharply higher. Nikkei was up 1000 points or around 6%. Those who invested in the markets during last week must be happy with their investment decision because if we are not making an error in reading the astro cycles then Friday was the bottom of 2016.

Energy prices moved sharply higher on Friday which also supported the sentiments as huge buying came in. Oil \$27.71 and S&P 1821 should be the lows of 2016. We may not see these prices again this

year, and though our view is not that bullish for oil it may hold this level and may move in a sideways direction once this rally is over.

Other commodities like softs, grains and metals traded directionless. Emerging market currencies made a U-turn from mid Thursday and they are well off from their lows. Russian Rubble went from 85.60 to 78.50 within twenty hours and many other emerging market currencies also acted very aggressively so it looks like emerging market currencies have also made a bottom and that this could be very negative news for commodities. It looks like S&P may not trade below 1862 level again for a long time.

I am sure you must have enjoyed reading our book, and we would appreciate it if you add your comments. If you think that this book is something worth having for investors, then please recommend this book to them. Many of you must be wondering why I always push so hard when it comes to selling my book? I always wanted the masses to see that there is a theory which uses hidden indicators and those indicators can guide us very correctly. There may come a stage when I will stop writing the yearly predictions books because it takes months of efforts and calculation to write them. This might be my last book.

You can put testimonials here: <http://www.mahendraprophecy.com/post-testimonials.php>

On Thursday we recommended buying APPLE in Fridays daily stock report with target of 10 to 20% rise from \$95.00. On Friday Apple moved sharply higher and this rising trend will continue.

Many stocks have moved aggressively, they made substantial gains from Wednesday and those who accumulated on Wednesday must be feeling luck. Emerging markets are in our favorite list, these ETF's are trading at their lows and the higher side is wide open. **FMCC, FMNA and ALK** moved sharply higher, and we recommend to start accumulating positions in FMCC and FNMA.

Here are the trading ranges and strategies for Wednesday:

GOLD/SILVER/BASE METALS

Gold and Silver traded sharply higher on the options expiry day. Wednesday will be the final positive day so stay away from any buying in precious metals. On the higher side one can take selling positions on Wednesday because from late Thursday gold prices can lose value. Stay away from precious metals and metals stocks.

Get ready to buy DUST around 12.25 levels. **Watch emerging market currencies as they are ready to gain value so Gold may lose in Rupee, Real, Peso, Rand and Rubble terms.**

Base metals will keep moving higher on Wednesday and Thursday so no shorts are recommended. Hold long positions in platinum. One can buy base metals like Lead, Nickel, Aluminum and Zinc.

Gold won't be able to trade above \$1123.80 for more than three days. Sell Silver as well around \$14.55 level. **If there is any sharp rise after the FED decision, one can take short positions as metals will start falling from mid-Thursday.**

Important point to remember: **After five years, gold's time cycle is changing against most of the emerging market currencies so it will start losing value against Rupee, Real, Peso, Rand, Rubble and**

many other currencies. Gold may lose 20 to 30% value against these currencies. If you are invested in gold in these currency terms, you should get out. This phenomenon will happen for the first time in many investors lives so traders in these countries have to be very careful. Sell gold and buy these emerging market currencies. Gold will keep losing value in dollar terms too.

A few important past predictions and levels for Metals from the Daily Flashnews are at end of this letter.

Here is Wednesday's range: **(March 2016 contract):**

GOLD: \$1127.80 to \$1114.15

SILVER: \$14.66 TO \$14.30

COPPER: \$206.50 TO \$199.90

PALLADIUM: \$501.00 TO \$491.00

PLATINUM: \$879.00 TO \$875.00

INDEXES

On Tuesday the Chinese market lost value, no one knows the reason behind this but surely some big traders are playing with the Chinese market. Our top pick is China, USA and the Indian market at this stage and they are our top picks in 2016. We are again expecting 100% up move in Shanghai.

On Tuesday the market moved sharply higher as expected and mentioned this in the Weekly newsletter and Flashnews. On Wednesday the market will remain mixed but one can buy positions around the lower side.

Buy the emerging markets on Wednesday and Thursday. The markets are already close to a low and hardly any down side is indicated in any markets on even the worst news.

This is what we mentioned yesterday: *Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.*

All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.

Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important

role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.

Short term important level on higher side will be 1935 level in S&P won't fall below 1864 level. Once S&P closed above 1935 level for the three days then we may 100 rally in S&P.

Past important predictions and levels for indexes of daily Flashnews are at end of this letter.

Here are Wednesday's ranges: **(March 2016 contracts)**

HONG KONG (cash) – 19075 to 18728

NIKKEI – 17405 TO 16909

NIFTY S&P (Spot) – 7471 to 7401 Buy

CAC – 4379 TO 4283

DAX – 9829 TO 9705

DEX EURO STOXX – 3039 – 2988

FTSE – 5898 TO 5805

FTSE/JSE (Cash) – 42498 to 41929

S&P e-mini – 1911.25 TO 1874.25

NASDAQ 100 e-mini – 4275.00 TO 4183

RUSSELL e-mini – 1027.00 TO 995.00

DOW e-mini – 16155 TO 15908

TREASURY BOND

On Tuesday Thirty Year bond traded mixed to positive. As mentioned in this week's newsletter that Wednesday and Thursday would be the final day for this ongoing bull market. Late on Thursday Thirty year will turn around, and will end this ongoing longer term rally so hold your positions tightly. One can add more on the selling side on late Wednesday and Thursday.

This is a great time to put your final bets in TMV, TTT and TBT. Today one can add more selling positions in Bond around the higher levels.

A few past important predictions and levels for bonds of daily Flashnews are at end of this letter.

Wednesday's trading range (March 2015 contract):

TREASURY BOND – 160-25 TO 159-20

SOFT COMMODITIES

Soft traded directionless with small gains. Stay away from any major trade or just trade in and out. Coffee is the only soft commodity in our buying list. Avoid the rest of the softs like cocoa, sugar, orange

juice and lumber. Sugar shouldn't close below \$14.00 for the more than three days because that can push sugar prices towards \$12.88. Stay long in coffee.

Remember - Coffee will struggle to close above \$128 and the maximum down side is \$112 or \$109. One can start accumulating coffee if it starts trading above \$118.00. Cotton will struggle to close above \$64.88, and sugar \$15.45. On the down side cotton will hold \$61.28 and sugar \$13.45. At this stage we not recommending any buying in cocoa, orange

juice, lumber.

Wednesday's trading range: (March 2016 Contract)

COFFEE: \$118.18 TO \$114.95 Buy

COTTON: \$61.95 TO \$60.95 Avoid

SUGAR: \$14.23 TO \$13.86 avoid

GRAINS

Soy, meal and corn traded a bit negative. On the other hand, wheat closed in the green. On Wednesday one can trade in and out as per the ranges mentioned below, but one should get ready to **buy some aggressive positions on late Thursday as soy, corn and most of the grains can move sharply higher from the lows.**

Buy some aggressive positions in soy tomorrow around the lower sides. Don't put a stop-loss, because we want to hold positions. One can accumulate soy meal and wheat for the short term.

Remember this is what we mentioned on the 14th of January: Members must buy grains because we see big weather related issues coming from the end of January which could bring disasters to many places on this planet, and any crop damage news can push prices higher. We have been watching our grains accuracy level very closely, and at this stage our accuracy levels are very high so take advantage of this. Trade in and out in wheat and corn, but soy products should be in your buying list on Monday. The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see that 5-7%

positive moves. We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.

Wednesday's trading range (March 2016 contracts):

CORN: \$371.00 TO \$365.00

WHEAT: \$493.00 TO \$484.00 Buy

SOY: \$888.00 TO \$868.00 BUY

SOY MEAL: \$273.30 TO \$268.15

SOY OIL: \$31.07 TO \$30.28

ENERGY

On Tuesday oil prices moved sharply higher as predicted. We are recommending adding more buying positions around the lower sides without any fear as oil is in the process of bottoming out. Add some positions in heating oil and RB Gas around the lower sides. Natural gas will trade on both sides. Don't buy any major positions in energy stocks.

The best strategy will be trading and out in oil which will make you good money. However, you should remember that when you buy 10 contracts around the lower ranges then book profit in 8, and hold 2 for the medium term as we don't see oil going below 28.38 and on the higher side we may see \$35.00 levels.

This is what we mentioned yesterday: Hold positions and just trade in and out on Wednesday. Last week's strong rebound in oil from the lower levels brought some profit booking. However, this profit booking should be taken as a buying opportunity so do not miss the opportunity to buy oil on Tuesday. Do not take any aggressive positions in heating oil and RB gas. Natural gas will gain some momentum. From mid Tuesday we see oil and energy stocks rebounding strongly, and oil can keep moving higher so this is a great time to take some buying positions in Oil and energy stocks. We are expecting a 10-15% move in the next 10 trading sessions.

The current rally in oil can take it up to \$35.18, but we don't see it going above that at this stage so traders and investors must book profit if it reaches there.

Natural gas will trade on both sides. ERX, GASL and UWTI moved in a positive direction.

Few past important predictions and levels for energy of daily Flashnews are at end of this letter.

Wednesday's trading range (All March 2016 contracts):

OIL: \$32.05 to \$29.15

NATURAL GAS: \$2.17 to \$2.09

HEATING OIL: \$0.9909 TO 0.9325

RB GAS: \$1.0838 TO \$1.0245

CURRENCIES

On Tuesday currencies gained value against USD, one thing that is getting clearer is our view that the USD won't be able to trade above 100.55 in the medium term, and it that looks like this will happen. On Wednesday we have the FED decision, and any rise in USD after the decision should be taken as a selling opportunity.

Emerging market currencies are top picks on Wednesday around the lower sides. Selling is recommending in British Pound on any rise. We are don't see any move in frontline currencies so watch the ranges mentioned below to trade in and out for day trading propose.

Buy most of the emerging market currencies (Rupee, Real, Rand, Peso, and Rubble) and they will keep gaining value from here. They gained on Tuesday as predicted and these currencies will keep gaining. Australian and Canadian dollar will move higher but they will fail to hold value on Thursday.

The best strategy will be trading in and out in all major frontline currencies.

Sell Pound around 1.4478, Australian dollar 0.7068, and Canadian dollar around 0.7148. Euro, Franc and Yen have very limited higher sides, any 100 pip rise should be taken as a selling opportunity. All these currencies may move towards new lows.

Few past important predictions and levels for currencies of daily Flashnews are at end of this letter.

Wednesday's trading range: (March future contract)

DOLLAR INDEX – 99.45 to 98.73

AUSTRALIAN DOLLAR – 0.7047 to 0.6952

CANADIAN DOLLAR – 0.7148 to 0.7048

BRITISH POUND – 1.4407 to 1.4278

EURO – 1.0927 to 1.0809

JAPANESE YEN – 0.8488 to 0.8419

SWISS FRANC – 0.9865 to 0.9827

RUPPEE – 67.95 to 67.51 (Spot)

RAND – 16.50 to 16.26 (Spot)

Thanks & God Bless, Mahendra Sharma,

26 January 2016, 03.00 PM, Santa Barbara

Some past important notes and important ranges from our daily flashnews:

From few Flashnews important commentary:

This is what we mentioned 18 Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.

After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.

There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21st of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.

Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts. The worst case scenario is almost over, and on Monday most of the markets will trade uncertain or will open gap down but won't break their lows. On Monday the USA market will remain closed and on Tuesday the USA market will open.

Important note – In the last 20 years ever since I started representing my view, I haven't seen many investors entering the market at the bottom or selling positions on top. If we see that this is around the bottom, then investors should buy positions here rather than selling everything and getting out. I haven't sold any positions in the stocks I bought last week, and I don't plan to sell them till mid-2017. In the last two weeks my account value has also come down but I am sure it will move up back. The same thing happened when the markets crashed in Augusts and September and the account value of many went down but they bounced back from October.

In the last 16 months' the market hasn't done anything but the time is coming back for us to make money and the market will now start walking with us. Have some patience for the next few days.

Iran Nuclear deal and sections were lifted during this weekend may provide great opportunity in buying oil around lower level on Monday and Tuesday. This is good for world economy as there is one economy now open and corporates are ready to enter Iran. This could be bad news for Saudi and many middle-east oil rich nations because their premium and supremacy will go away.

Monday will be a holiday and we are excited to announce that our book "2016 Financial Predictions" will be out on Monday 10.27 PM Santa Barbara time. This will be a great gift for you and your friends who are looking for the right investment and trading strategy.

Immediately after job data we mentioned this on Friday, 2 October: Job data unexpectedly came out negative and market came down sharply lower but these lower prices may not be able to remain for more than a few hours or a few days so time to acquire more positions here in USA market. This week on Monday S&P made a low of 1863 level and right now it is trading at 1886 and this level should be held and it won't trade below 1886 for more than three days.

In 2011 mid-October S&P bottomed out and moved 30% in the 5 months, and every year there on S&P always bottomed out in mid-October and same we are expecting this year to happen as we have been predicting that market should bottom out by 10 or 16 October 2015. We are still expecting a huge rally in the first quarter of 2016. We are expecting S&P to gain 20% by 2016 March.

Thanks & God Bless, Mahendra Sharma, 7.00 AM Santa Barbara, 2 Oct 2015, 5.45 AM

This is what we mentioned 2 September: Watch **UVXY** – ultra volatile etf went sharply higher in the month of Mid-August from \$25.00 to \$86.00. Many bear etfs like **RUSS and YANG** are moving up crazily, shorts in these etfs shall provide year results in the next few months.

Metal:

This is what we mentioned on last week Monday 14 Jan 2016: *On Monday we highly recommend taking selling positions in gold and silver on any rise. If gold and silver open higher and metals stocks open higher then we highly recommend booking profit in metals stocks because the positive week has already ended. One can take buying positions in DUST around \$12. The maximum higher side in gold is \$1114, and on the lower side gold can move towards \$1060 if it breaks \$1083. There is a short astro support at \$1082. Silver can move towards new lows. Avoid any buying in metals around the higher side mentioned values, the higher side values should be taken as a selling opportunity.*

This is what we mentioned on 16 November: *Last week precious and base metals traded very negatively and many base metals traded towards multi year lows, but metal stocks traded relatively stable. Gold is holding \$1080 at this stage and on the higher side it is refusing to move above \$1090. We still don't see gold closing above \$1097 and on the down side gold closing below \$1080 will open the door for gold to move towards \$1055 to \$980.*

This is what we mentioned on last Monday 26 October: *Metal investors made money from 2000 to 2007, and 2009 to 2011 by buying and holding positions, but that era is gone, and now you have to be a smart metal investor or you have to become an opportunist rather than falling in love and holding for years which won't take you anywhere. Tuesday will be the best day to buy positions in DUST at \$11.80. The Fed meeting is on Wednesday so trade with light positions. At this stage gold will struggle to close above \$1178 and won't close above 1184 as predicted two weeks ago. Silver is showing positive signs but positivity will disappear as it won't close above \$16.05. On the down side gold will hold value at \$1151. If gold breaks the lower side support level of \$1151 then it will be an extremely bearish indication so remain vigilant.*

These levels we mentioned on last week Monday and Wednesday is working very well so far. This is what we mentioned 3 October: ***Tuesday one should trade in and out in metals, any rise in Palladium should be taken as selling opportunity, and Palladium won't go above \$720 levels. Get out from metals stocks once HUI reaches to 125 level. Maximum higher side for silver is \$15.95 and gold \$1168 and \$1184 looks difficult to move higher.***

August note: Gold came down from \$1935 TO \$1073, and up 7% from lows but must remember that it is in bear astro cycle.

INDEXES:

This is what we mentioned 18 Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

Now we still don't see any major trend changing pattern even though the market has breached all technical support charts according to most of the analysts. We believe that even the technical charts can turn positive if the market rallies for two weeks. We watch the astro indicators closely so we would like to stand with our reading of our theory or what we have been good at for the last thirty years.

S&P broke 1881, and also went below 1862 level, in fact it made a low of 1848 level and closed at 1875 level which gave many relief. Anyways, those who accumulated stocks and indexes on Friday will be rewarded big because this fall is an intermediate fall not a bear trend. This market is in fear, and no one knows what will happen, yet everyone continues to shout loudly and run here and there, like the people in the classic Godzilla movies. If you ask anyone why they are running away, no one has an answer.

There is no doubt that on Monday when most of the global markets open there will be a lot of fear. Investors won't like to open their trading accounts because of fear, and the fact that they don't want to see a sharp decline in their account value, but believe me this market is providing you with one of the best buying opportunities so don't miss it Monday and Tuesday any below 1864 levels.

This alert was sent yesterday at 8.30 AM on 13 Jan 2016: *Oil is trading around \$30.38, S&P came to 1886, and FANGAM (Facebook, Amazon, Netflix, Google, Apple and MSFT) are trading lower. Earnings in tech stocks are on the way from the Third week of January. I surely recommend betting on Google, Apple, Microsoft, Netflix and Amazon.*

Oil will hold value, and those who bought oil yesterday can hold positions. S&P may retest 1881 level but you don't want to wait until that price hits. If you ask me the worst case scenario, then it may move towards 1862 but the chances of that happening is very minimum. Currently traders are worried about

*the technical because the charts turned very ugly and traders, funds and Institutions sell aggressively when charts are negative. However, our astro indicators for the markets are turning positive from the 19 January of so from **now to the 19th of January** will be a great time to acquire positions if you are planning to buy something for the next five weeks or more.*

Here are a few trades that look very attractive:

AMZN: 26 Feb call, strike price \$620 – currently trading at \$23.00

GOOGL: 26 Feb call, strike price \$750 – currently trading at \$23.50

MSFT: 26 Feb call, strike price \$52 – currently trading at \$2.16

APPL: 26 Feb call, strike price \$100 – currently trading at \$3.50

This is what we mentioned last 25 Oct, Monday: ***On the higher side S&P has achieved our predicted short term level of 2068 and it may struggle to move above 2088, which is something that we have emphasized since the last quarter of 2014. Book some profit in the market around 2088.***

This is what we mentioned on 1 October, Thursday: ***On Wednesday most of markets traded very positive throughout the day without any corrections and volume was also very decent. S&P held 1863 level very well, and trading above 1928 will open avenue to reach 1988 in coming few weeks.***

Thirty Year Bond

This is what we mentioned on 6 October: *Most of you are aware that our Thirty Year Bond selling recommendations are for the medium and longer term. In the last six months a few selling opportunities came at 172 and 162, and we took advantage of selling and did very well. We have been recommending buying TMV but most of you must remember that our recommendations is only for a two year time horizon. Don't make any aggressive short term bets on Thirty Year Bond or TMV.*

Thirty year won't go above 160 level. Right you can accumulate March 2016 put options. We are sure you must be holding positions in TMV and this trade is for the longer term.

This is what we mentioned on 26 June, Friday: ***Wednesday Thirty-year bond lost more value, June contract came down to 151 so it lost almost 21 points from 172. Our predictions of Thirty-year bond topping out proven best call and we also mentioned that fortune could be made and we sure many of you must have done amazingly well in this trade in the last three months.***

This is what we mentioned on the 2nd of Feb: *Thirty Year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 172 (June contract) or the below mentioned higher side ranges.*

Grains

*This is what we mentioned on 14 January: **Must buy grains because we see big weather related issues coming from the end of January which could bring disasters to many places on this planet, and any crop damaging news can push prices higher. We have been watching our grains accuracy level very closely, and at this stage our accuracy levels are very high so take advantage of our accuracy level. Trade in and out in wheat and corn, but soy products should be in your buying list on Monday.***

*This is what we mentioned on last week 18 December: **Grains are our favorite in 2016. Thursday one can trade in and out. Down side is very limited from current levels so take some buying positions around the below mentioned levels in most of the grains, which may provide you with good returns within the next ten days.***

*The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see that 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.***

*This is what we mentioned on 28 July: **Time to build long positive so don't miss this opportunity. Last week corn closed around \$375, wheat \$477 and \$880, these are great level to cover 100% shorts in grains.***

Energy:

*This is what we mentioned last week Monday, 21 December 2015: **Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.***

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

*This is what we mentioned on 27 August 2015: **If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.***

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

*This is what we mentioned on the 27th of April 2015: **Adopt trading in and out strategy in energy, but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we mentioned on last week Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned for Tuesday: *Monday most of currencies traded negative against USD. South African Rand is in free fall, and many other South American and South East Asian currencies are also falling sharply lower. Israeli Shekel is ready to make new low and may collapse sharply during this week. Those who invested in our recommendations in USD and USD assets class have done amazingly well in the 18 months. In 2013 and 2014 books we strongly predicted that "Those who invest in USD and USD assets class will survive or will able to perform well", we also stated that going against USD*

would bring disaster path. Who though that these strong words will turn in to reality. Always most of predictions we make are real, we don't predict to attract anyone and neither we falsely claim. If our predictions goes wrong then we accept our error without any ascus.

On Tuesday most of currencies will have selling pressure but dollar will struggle to remain able 100 market at this stage so watch closely. Tuesday - Avoid any buying in emerging market currencies, sell Euro, Franc, Pound and Yen. Commodity currencies like Australian dollar will gain value on Tuesday so buying is recommended.

There are chances that South African Rand may collapse and may hit 21.00 level so stay away from Rand and other emerging market currencies for the next 10 trading days.

This is what we mentioned on 22 December: Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.

This is what we mentioned on the 23rd of April: *On Wednesday currencies traded both sides, emerging market currencies traded positive. At this stage currency are trading directionless with without any clue so trading in and out will remain best strategy. Thursday profit booking will come in USD but we are not recommending any short in USD but surely one can trade in and out in all major currencies on daily basis, which may provide you great return.*

We don't see Euro holding above 1.1278 and don't see dollar Index going below 95.00 level in medium term so remember these figures.

The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on 15 Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
